**Sec 363/A**

Q1.Create a Java program to serialize and deserialize a Student object. The program should:

Serialize a Student object (containing id, name, and GPA) and save it to a file.

Deserialize the object from the file and display the student details.

Handle FileNotFoundException, IOException, and ClassNotFoundException using exception handlingQ1.

```
-> import java.io.*;
```

```
// Serializable Student class
```

```
class Student implements Serializable {
```

```
    private static final long serialVersionUID = 1L;
```

```
    private int id;
```

```
    private String name;
```

```
    private double gpa;
```

```
    public Student(int id, String name, double gpa) {
```

```
        this.id = id;
```

```
        this.name = name;
```

```
        this.gpa = gpa;
```

```
    }
```

```
    public void display() {
```

```
        System.out.println("Student ID: " + id);
```

```
        System.out.println("Name: " + name);
```

```
        System.out.println("GPA: " + gpa);
```

```
    }
```

```
}
```

```
public class StudentSerializationDemo {
```

```
    private static final String FILE_NAME = "student.ser";
```

```
    public static void serializeStudent(Student student) {
```

```
        try (ObjectOutputStream oos = new ObjectOutputStream(new FileOutputStream(FILE_NAME))) {
```

```
            oos.writeObject(student);
```

```
            System.out.println("Student object serialized successfully.");
```

```
        } catch (FileNotFoundException e) {
```

**Name :- Utkarsh kuamr**

**Sec 363/A**

```
        System.err.println("Error: File not found. " + e.getMessage());
    } catch (IOException e) {
        System.err.println("Error: Unable to serialize object. " + e.getMessage());
    }
}

public static Student deserializeStudent() {
    try (ObjectInputStream ois = new ObjectInputStream(new FileInputStream(FILE_NAME))) {
        return (Student) ois.readObject();
    } catch (FileNotFoundException e) {
        System.err.println("Error: File not found. " + e.getMessage());
    } catch (IOException e) {
        System.err.println("Error: Unable to deserialize object. " + e.getMessage());
    } catch (ClassNotFoundException e) {
        System.err.println("Error: Class not found. " + e.getMessage());
    }
    return null;
}

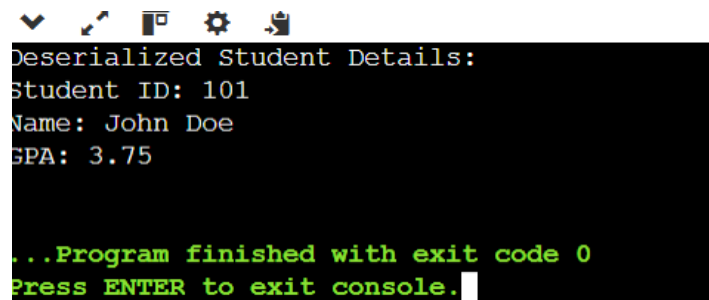

public static void main(String[] args) {
    Student student = new Student(101, "John Doe", 3.75);
    serializeStudent(student);

    Student deserializedStudent = deserializeStudent();
    if (deserializedStudent != null) {
        System.out.println("Deserialized Student Details:");
        deserializedStudent.display();
    }
}
}
```

Name :- Utkarsh kuamr

Sec 363/A

#### OUTPUT

```
Deserialized Student Details:
Student ID: 101
Name: John Doe
GPA: 3.75

...Program finished with exit code 0
Press ENTER to exit console.
```

Q2. Create a menu-based Java application with the following options. 1.Add an Employee 2. Display All 3. Exit If option 1 is selected, the application should gather details of the employee like employee name, employee id, designation and salary and store it in a file. If option 2 is selected, the application should display all the employee details. If option 3 is selected the application should exit.

```
-> import java.io.*;
```

```
import java.util.*;
```

```
class Employee implements Serializable {
```

```
    private static final long serialVersionUID = 1L;
```

```
    private int id;
```

```
    private String name;
```

```
    private String designation;
```

```
    private double salary;
```

```
    public Employee(int id, String name, String designation, double salary) {
```

```
        this.id = id;
```

```
        this.name = name;
```

```
        this.designation = designation;
```

```
        this.salary = salary;
```

```
    }
```

```
    public void display() {
```

```
        System.out.println("Employee ID: " + id);
```
